

January 2022

Exhibited at the "6th SMART FACTORY Expo"

Shintec Hozumi Co., Ltd. exhibited at the "6th Smart Factory EXPO" (January 19-21).

We introduced the transport robots NN-1100 and NN-470, smart glass demonstrations, and the fork robot NFF-600.

The function that can connect and towed without remodeling the dolly, and the centering function (equipped on the NN-470) that detects the center of the dolly and slips underneath to engage the center attracted particular attention.

We would like to express our sincerest gratitude to everyone who visited us. Shintec Hozumi will continue to propose customers' business solutions. Thank you very much.
