Sustainability report published on official website

Shintec Hozumi Co., Ltd. has been working through its business to achieve SDGs and Carbon Neutrality.

We have released the 2022 Sustainability Report, which aims to achieve both "contributions to local communities" and "global scale issues" as well as corporate growth. "Sustainability Report" has been released.

You can see Shintec Hozumi's sustainability-based initiatives and business details. Going forward, we will continue to actively engage in business and contribute to the realization of a sustainable society with the aim of becoming a company that is trusted by all stakeholders.

2022 Sustainability Report

Publication of the Sustainability Report

The diagram shows a timeline from 2014 to 2050. Key milestones include: 2014 (Construct solar power generation system), 2020 (Reduce CO₂ with business reforms), 2022 (Start CO₂ FREE production), 2025 (Decrease CO₂ Emissions by 50% OFF), 2030 (100% renewable energy), and 2050 (2050 CARBON NEUTRAL). A circular diagram shows 'Total CO₂ Emissions' decreasing from 0t to CO₂ ZERO.

Our company continues to work toward the "Realization of a Carbon-Free Society" and "Promotion of SDGs" through activities based on the "2050 CARBON NEUTRAL" announced in June of 2021. When considering the disasters caused by climate change throughout 2022, such as the flooding that occurred first in South Africa (April), then China (June) and Pakistan (September), it became clear that measures to combat global warming must be accelerated.

To this end, our entire company came together with the aim of "Doing what we as a business can do right now, as quickly as possible" in order to accelerate decarbonization activities such as improving the output level.

As a result, it is projected that we will achieve the 2025 target of "Reducing CO₂ emissions by 50%" 3 years ahead of schedule. Our company will continue to work together with our customers in contributing to the realization of a sustainable society through "better system proposals" and "environmentally friendly products" based on our strength of TPS.
